

## APPLICATION

These accessories are for processing glassware, metal vessels, filling machine parts and many other items used in pharmaceutical manufacturing processes. A complete range of sanitary materials handling accessories are available for use with Reliance 380PG, 480PG, 580 and 680 Series Pharmaceutical Grade Washers.

## DESIGN FEATURES

The Reliance **380PG** and **580** Pharmaceutical Grade Washers accommodate three accessories per load, in any combination, to provide complete flexibility. For example, small and large glassware/metal vessels can be processed in the same load as solid items, such as filling machine parts, when using the correct combination of accessories.

The Reliance **480PG** Pharmaceutical Grade Washer is capable of processing four accessories per load, allowing for increased capacity. A combination of single, double and triple wide accessories can be used simultaneously, providing cleaning solutions for a wide range of applications.

The Reliance **680** Series Pharmaceutical Grade Washers are designed to process larger items and accept one accessory per load. A multi-accessory header is available to process smaller items in the same load as large glassware/vessels.

All accessories in contact with cleaning solutions are electro-polished and/or passivated and constructed of #316L stainless steel for corrosion resistance and easy cleaning. The lightweight design provides easy handling and the plastic wheels allow for easy rolling of accessory headers into and out of the wash chamber. Plastic tips on spindles prevent scratching and/or breakage of glassware.

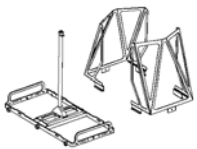

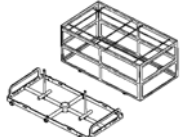

Accessories attach to manifold connectors located in the bottom of the wash chamber automatically at the start of each cycle. The Reliance washer balanced spray system holds glassware in place without the need for hold-down screens, minimizing glassware breakage. All accessories in contact with cleaning solutions can be dismantled for easy cleaning, design meets cGMP requirements for drainability and sanitary design. Surface finish varies between 20 and 35 µin (0.5 and 0.9 µm).

A documentation package CD (including welding logs, surface finish report, and heat numbers) is provided for all accessories in contact with the cleaning process.

*NOTE: Design is based on ASME BPE-2016 standards, according to STERIS's interpretation and when determined practical. Refer to BPE statement for details.*

## RELIANCE SPINDLE HEADERS (FOR 380PG, 480PG, 580 AND 680 SERIES WASHERS)

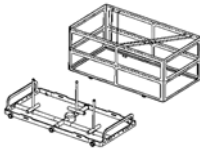

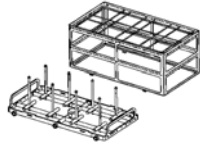

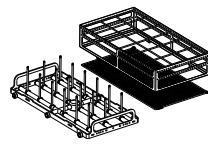

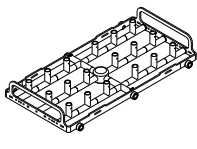

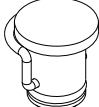

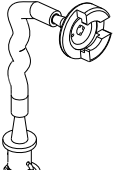

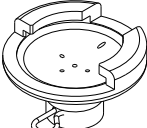

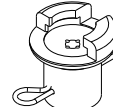

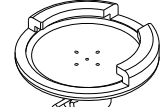

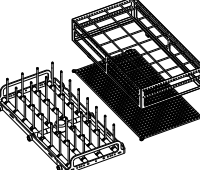

Individual spindles assure thorough cleaning inside flasks, graduated cylinders and bottles. Open bottom allows water to drain completely from inside of glassware. Overall dimensions (W x L) for all spindle headers: 12-7/8 x 24-1/2" (327 x 621 mm).

## RELIANCE BOTTOM ROTARY SPRAY HEADER (FOR 380PG, 480PG, 580 AND 680 SERIES WASHERS)

Two spray arms, mounted at different heights, allow for free movement of rotary spray action and provide bottom load coverage. Spray arm/hub has holes in center to eliminate dead spots.

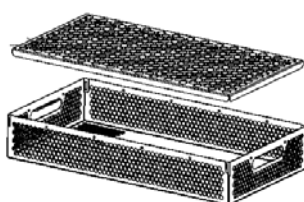

*Note: To allow for free movement of spray arms when loading more than one Bottom Rotary Spray Header side-by-side in the washer/dryer, loading direction of every-other header must be reversed as shown. A and B designate the rotary spray arms.*

## RELIANCE ACCESSORIES FOR MISCELLANEOUS ITEMS

General Purpose Basket and Cover are used in conjunction with the Bottom Rotary Spray Header to process beakers and hold down lightweight, small miscellaneous plasticware during washing. Open wire frame design of the basket and cover allows maximum water coverage to all parts of the load. The cover has openings sized to keep plasticware in place.
