

Sources of Residue

There are many potential sources of residue in aseptic areas, from people to processing equipment.

In most situations, residue on floors and walls pose limited risk, hence visually clean is generally the recognized target for a residue management program. STERIS surface disinfectants, alcohol solutions, and water for injection rinsing agents are designed to be effective at removing residue. Any aseptic area can show residue because of the many possible sources. STERIS has recommendations and products to prevent and remedy cleanroom residues.

People

- Skin flakes
- Hair
- Fibers

Transport of Materials & Supplies

- Soil
- Cartwheel debris

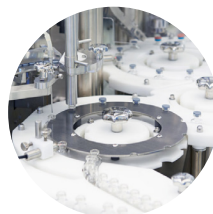

Treatments On Walls & Floors

- Sealants
- Waxes

Drug Components

- Spill of liquids & powders

Processing Equipment

- Metal & plastic debris
- Lubricants
